**Iron or stainless steel grids**, for drainage of fountains with innovative design.

Grids made of iron or stainless steel (depending on model). The grids allow for the rapid drainage of waters towards the sump, thus avoiding, thanks to its small slots, the possibility of getting stuck with stones, leaves etc. that could enter the drainage area.

## STANDARD FINISHES:

Iron .....	Ref. RFH01
Stainless steel .....	Ref. RFI01
Perforated plate .....	Ref. RFICP
Perforated drinker.....	Ref. RFPICP
Circular stainless steel .....	Ref. RFC01
